

MY SUGGESTION FOR IMPROVING MY FAVORITE WEBSITE

1)Website appearance on mobile devices:

-So far the mobile view is on point since it shows all the details needed from the web and very interactive only if those icons after get in touch button could be removed since they eat the space and not necessary needed.

2)Website Speed on Slower Connection Speed:

-Also from the website I choose it does not have images and videos so maybe this makes it faster so have not find any suggestion since it is as fast as light.

3)The resources that take the longest to load:

-The jquery links since they are CDN links so maybe if he could have downloaded the JQuery libraries and put them in the Java script folder.

4)The memory-heavy Java script functions:

-Again the java script is not suppose to take the big memory so it should be combined into one file.

5)Tips suggested by the Audits tab are:-

-PERFORMANCE:

- a)Ensure text remains visible during web font load.
- b)Minimize main-thread work.
- c)Reduce Java script execution time.
- d)Minimize Critical Requests Depth.

-PROGRESSIVE WEB APP:

- a)Does not respond with a 200 when offline.
- b)Address bar does not match brand colors.

-ACCESSIBILITY:

- a)Elements with [role] that require specific children [roles], are missing.
- b)Buttons do not have an accessible name.
- c)Form elements do not have associated labels.
- d)Background and foreground colors do not have a sufficient contrast ratio.

-BEST PRACTICES:

- a)Includes front-end java script libraries with known security vulnerabilities.

-SEO:

- a)Document does not have a meta description.
